Tools

List Tools

Clear

- Get a user's weekly therapy progress summary including mood trends, sessions completed, diary entries made, and burnout indicators.

get_coping_strategies

Retrieve the full list of therapeutic coping strategies available to users. Returns strategy names, descriptions, and categories.
- Create a new thought diary entry. Pass emotions as comma-separated name:intensity pairs e.g. 'anxiety:8,sadness:5,guilt:3'. Intensity is 1-10. Returns the entry with AI-generated reflection.

create_diary_entry
- End an active CBT session and receive a therapeutic summary including outcomes and recommended next steps.

end_session
- Analyze text for crisis indicators such as suicidal ideation or self-harm risk. Returns a risk assessment and suggested resources.
